IBH Planning for 2022-23: Work in Progress REVISED 3.8.22

CTC Strategic Goal – by 2025 "Behavioral health care is integrated into every primary care practice"

Near Term Goals:

To define ways that CTC can assist primary care practices in transforming collaborative, co-located or integrated primary care practices and achieving NCQA BH distinction.

Focus on identifying Year One (2022 – 23) activities, as part of CTC 3-year Strategic Plan.

Environmental Scan: Take stock of all the work that is going on in RI relative to BH

	Primary Care	Closely Aligned to Primary Care	Specialty Care
OHIC Affordability Standards related to	Х		
behavioral health integration into primary care			
TBD			
Children's BH System redesign (Marti and		X	
team) – key feature mobile response

Truven 2.0 – Faulkner Report			Х
Kids count – review of Governor's budget		Х	
RIDOH primary care report	Х		
National Academies – "five factors"	Х		
Unite Us		Х	
Doula and CHW reimbursement		Х	

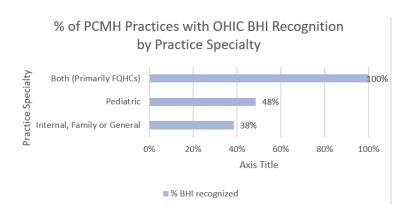

Where are we today? Current State

Highlights include:

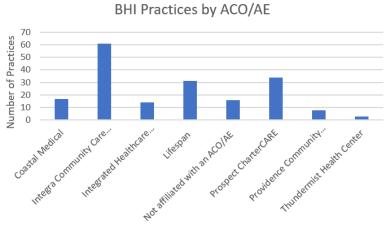

- Stats So Far: (see full data below)
 - 53 adult PCMH practices (38%) have achieved OHIC BHI recognition as of 2022 (ref: OHIC 2022 report)
 - o 33 pediatric PCMH practices (48%) have achieved OHIC BHI recognition as of 2022.
 - 13 practices (100%) that serve both children and adults have achieved OHIC BHI recognition as of 2022.

- Focus has been on integrated; but smaller practices may need collaborative/co-located models
- Practices range in size and affiliations some are part of a systems of care others are independent practices
- Workforce shortages particularly of behavioral health clinicians challenge all practices but especially small and unaffiliated practices that don't have the funding or infrastructure to implement BHI.
- Doula and CHW reimbursement

■ Yes ■ No

Accountable Care Organization/Accountable Entity

What Do We Already Know is Coming in the Next 1-2 Years?

- Focus on lack of workforce diversity is a focus in the psychology field; Introducing Psychology to h.s. students to build pipeline
- More telehealth
- Digital technology (new apps?)
- OHIC: Affordability Standards, BH spend (Rule-making in April)
- New 988 phone line (July 2022)
- Unite Us platform continued expansion
- HRSA funds (Fed admin priority on mental health, SUD)
- Doula and CHW reimbursement
- More attention to seniors/primary care?

What are the gaps/challenges in achieving CTC 's goal?

- Funding for practices
- Knowledge and skills to implement
- Practice Champion
- Work force shortage for practices that would like to hire a BH clinician as part of PCMH care team
- Smaller practices don't have volume for imbedded resource
- Non System of Care practice may not have funding, volume or infrastructure to support BHI
- Prevention for 0-8 year olds- gap not being addressed
- Burnout post pandemic, recruiting and retaining staff likely to get worse as more people are leaving the field than are coming into the field
- Ways to incentivize outpatient therapists to work in or with primary care
- Health Equity
- Lack of cross-training/silo by role
- Other?

Some of the Questions We May Explore

- 1. Which of these gaps would be most impactful for CTC effectively address in 2022-23 to meet the 2025 Strategic goal?
- 2. Ways CTC can assist primary care in addressing health equity in delivery of IBH in primary care? What are the barriers? How can CTC help?
- 3. Specific Strategies/Approaches to Consider Might Include:

- a. Ways that tele-behavioral health can address gaps and challenges. What is needed to make this happen? How can we build off our current program and establish sustainable, scalable standard/best practice models to meet primary care practices where they are?
- b. Ways to integrate social needs screening and intervention for all primary care practices.
- c. Where do MAT services fit in to the effort to integrate BH into all primary care practices?
- d. What needs to be approached differently for peds vs adults as we consider activities and strategies?
